

Package ‘rworldxtra’

February 20, 2015

Type Package

Title Country boundaries at high resolution.

Version 1.01

Date 2012-10-3

Author Andy South

Maintainer Andy South <southandy@gmail.com>

Description High resolution vector country boundaries derived from Natural Earth data, can be plotted in rworldmap.

License GPL (>= 2)

Depends R (>= 2.10.0), sp

Suggests rworldmap

Repository CRAN

--------------	----------

rworldxtra-package *For mapping global data.*

Description

Enables mapping of country level and gridded user datasets by facilitating joining to world maps and visualisation options.

Details

Package: rworldxtra
 Type: Package
 Version: 1.01
 Date: 2012-10-1
 License: GPL (>= 2)

Version 1.01 newly uses updated Natural Earth Data for country boundaries.

Author(s)

Andy South

Maintainer: <southandy@gmail.com>

Examples

```
data(countriesHigh)
```

countriesHigh	<i>a high resolution world map, a vector map of 253 country boundaries</i>
---------------	--

Description

A 'SpatialPolygonsDataFrame' [package "sp"] object containing country boundaries derived from Natural Earth data. Polygons are attributed with country codes.

Usage

```
data(countriesHigh)
```

Format

The format is: Formal class 'SpatialPolygonsDataFrame' [package "sp"] with 5 slots ..@ data : 'data.frame': 253 obs. of 32 variables: .. ne_10m_adm: Factor w/ 253 levels "ABW","AFG","AGO",...: 1 2 3 4 5 6 7 8 9 10 ScaleRank : atomic [1:253] 3 1 1 1 1 3 1 1 1 attr(*, "levels")= chr(0) .. ```

Details

Derived from version 1.4.0 of Natural Earth data 1:10 m data.

The different country boundaries in rworldmap are processed from Natural Earth Data as follows : All : ~ rename any non-ASCII country names that cause R trouble ~ rename Curacao which is particularly troublesome ! ~ check polygon geometries using checkPolygonsHoles ~ set projections, e.g. proj4string(countriesCoarse) <- CRS("+proj=longlat +ellps=WGS84 +datum=WGS84 +no_defs") ~ set polygon IDs to country names (from ADMIN field) ~ copy ISO_A3 to ISO3 ~ replace missing ISO3 codes (6 in this version) with ADM0_A3 ~ check for duplicate ISO3 codes (2 in this version) ~ set ISO3 for Gaza to Gaza and 'Ashmore and Cartier Islands' to Ashm ~ replace POP_EST of -99 with NA ~ join on countryRegions data

countriesCoarseLessIslands : ne_110 countriesCoarse : ne_110 plus extra countries from ne_50 plus Tuvalu from ne_10 countriesLow : ne_50 plus Tuvalu from ne_10 countriesHigh : ne_10
